## **FIRE MARSHAL'S OFFICE BULLETIN**

O'Sullivan Films located at 1944 Valley Ave experienced a water main break at their facility on 12/18/2014. This break occurred under building #7A, creating the concrete floor to buckle, and filling the building with mud. At this time it is suspected a considerable void exists under the building due to the amount of wash out.

Facilities personnel have secured the water leak and have KEE construction contracted to fix the main. Construction is slated to begin December 29<sup>th</sup>, and could last 3 weeks. Facilities created a bypass for the fire sprinkler system to the rest of the plant bypassing building #7A. The bypass is constructed of fire hose in duct material connecting the hydrant at the cafeteria to the hydrant at the maintenance shop. By doing this, building #7A's sprinkler is out of service and the rest of the plant remains protected by its sprinkler system. Electric Lane will be shut down during this construction, the plan is for the new water line to go under the road.

Questions concerning this bulletin may be directed to the Fire Marshal's Office.
